#### Frequently asked questions

##### What is a kWh (kilowatt-hour)?

It's a measure of the amount of energy used in one hour. For example, if you have a 1,000 watt heater and you keep it on for one hour, you'll use 1kWh.

##### What is the Tariff Comparison Rate (TCR)?

It's a guide to compare the cost of energy tariffs. It's the average cost of each unit of energy based on a typical user - not how much energy you use personally. There's more information about your tariff on the ScottishPower website at [www.scottishpower.co.uk/products](http://www.scottishpower.co.uk/products)

##### What's included in the TCR?

It includes the dual fuel discount or online discount relevant to this tariff. It also includes any charges for additional products and services included in your tariff. The TCR doesn't include any exit or other fees, or other discounts.
